

Let Mothers Know You Care About Their Health Too

The **Care2 Project** helps maximize time by assessing the health needs of mothers and young children together in pediatric well visits. Many mothers take responsibility for attending their children's appointments – but do not regularly receive care for their own health. Care2 is working with practices to address this gap and integrate two generation care into existing workflows.

We are currently enrolling practices to engage in Wave 2 of this project from May 2024 – May 2025! Participants in Care2 will receive:

- **A \$3,000 stipend to support data collection**
- Free sleep sacks and board books to promote safe sleep with your patients – up to \$2,000 value
- **Maintenance of Certification (MOC) credit upon completion of QI activities**
- Support from a dedicated Practice Coach
- Learning collaborative to share challenges and success with peers across Ohio

Utilizing common practices for identifying needs around **smoke exposure, maternal depression, and family planning** as part of a quality improvement collaborative, the Care2 project was designed to support physicians and other healthcare providers that see both mothers and children under 5.

Help us reach children and families across Ohio! Consider joining the Care2 Project or sharing this information with your network or colleagues.
